

Case Study 5.1	
CPE Webinar - Generative AI as an Academic Tool in Understanding the Next Generation of Learning	
Course Code: CPE 411	Program: Computer Engineering
Course Title: Interactive Extended Reality	Date Performed: 26/03/2026
Section: 22S2	Date Submitted: 26/03/2026
Name(s): Ross Andrew Bulaong	Instructor: Engr. Jimlord M. Quejado
1. Discussion	
Write your own takeaways / learnings of the webinar about Generative AI (especially Claude) as an academic tool.	
2. Materials and Equipment	
Zoom Notes (For takeaways)	
3. Procedure	
Title of Webinar: Generative AI as an Academic Tool in Understanding the Next Generation of Learning Speaker(s): Engr. Christian Jay Cuevas Summary: The webinar addresses the skyrocket of Generative AI in the academic workspace, and how this is the “<i>next generation</i>” of learning in our society. I personally agree with this statement; whether we like it or not, AI will soon be a significant part of schools and the work that academies provide. The webinar first gives a refresher of what a Large Language Model (LLM) is, how they operate, how to properly use them, and the architecture behind the whole idea. Next, effective prompting was discussed to the listeners; leveraging Claude as the model. The webinar concluded with a short overview of the Retrieval-Augmented Generation (RAG) Architecture. Key Takeaways: • LLMs operate via tokens, not words. Each token corresponds to an ID (number) which is used to calculate the probability of the answer. • Effective prompting requires 4 key steps to create a structure that retrieves a good, useful answer: Persona, Task, Context, and Format • RAG (Retrieval-Augmented Generation) Architecture uses keywords / prompts to look through databases, APIs, and documents to create a proper response • Despite the inevitable rise of AI usage in academic spaces, it still depends on the professor whether or not the use of it is justifiable (or as the speaker said, if “<i>boomer yung prof</i>”) • Claude is the current best AI for coding purposes, and in turn, is the best for Software Engineers, I.T / C.S majors, or us, Computer Engineers.

Title of Webinar: Generative AI as an Academic Tool in Understanding the Next Generation of Learning

Speaker(s): Engr. Christian Jay Cuevas

Summary: The webinar addresses the skyrocket of Generative AI in the academic workspace, and how this is the "next generation" of learning in our society. I personally agree with this statement; whether we like it or not, AI will soon be a significant part of schools and the work that academics provide. The webinar first gives a refresher of what a Large Language Model (LLM) is, how they operate, how to properly use them, and the architecture behind the whole idea. Next, effective prompting was discussed to the listeners; leveraging Claude as the model. **The webinar concluded with a short overview of the Retrieval-Augmented Generation (RAG) Architecture.**

Key Takeaways:

LLMs operate via tokens, not words. Each token corresponds to an ID (number) which is used to calculate the probability of the answer.

Effective prompting requires 4 key steps to create a structure that retrieves a good, useful answer:

Persona, Task, Context, and Format

RAG (Retrieval-Augmented Generation) Architecture uses keywords / prompts to look through databases, APIs, and documents to create a proper response

Despite the inevitable rise of AI usage in academic spaces, it still depends on the professor whether or not the use of it is justifiable (or as the speaker said, if "boomer yung prof")

Claude is the current best AI for coding purposes, and in turn, is the best for Software Engineers, IT / C.S
